

# SproutBox

**A demand-driven  
microgreens production  
and supply platform.**

Connecting restaurant kitchens directly to a  
distributed network of local home growers.

# The Disconnected Supply Chain

## Demand (Restaurants)

Inconsistent, unpredictable supply of niche produce.

Low shelf-life of delicate microgreens during transit.

Lack of true farm-to-table traceability.

## Supply (Local Growers)

No predictable, guaranteed commercial demand.

Lack of structured, day-by-day growing instructions.

Difficult market access and complex logistics.

# Decentralized, Demand-Driven Routing

**Same-Day Delivery:** Fresh microgreens harvested and delivered directly to the kitchen on the exact day required.

# Built for Scale & Speed

# Lifecycle of a Demand-Driven Order

## The Physical Reality

## The Digital Database State

# Business Model Architecture

## Value Proposition

Ultra-fresh, hyper-local microgreens for fine dining; Turnkey income and guided cultivation for home growers.

## Customer Segments

B2B Fine Dining & Local Restaurants. Hobbyist Home Growers.

## Key Activities

Automated order routing, instruction distribution, quality control monitoring.

## Key Resources

SproutBox Platform (Next.js/Supabase), Standardized Starter Kits.

## Revenue Streams

Recurring restaurant subscriptions (Daily / Weekly / Bi-weekly deliveries).

## Cost Structure

Platform hosting, Starter kit fulfillment, grower payouts.

# User Validation: Platform Experience

## UI/UX Reception

100% Positive Rating. (66.7% Excellent, 33.3% Good).

## Localization Adoption

77.8% of users actively utilize the multi-language option, validating the need for accessible agricultural tech.

## Onboarding Success

100% found the tutorial section helpful (55.6% Very helpful).

# User Validation: Delivery & Hardware

**Delivery Consistency:** 100% highly satisfied with accuracy.

**NPS Score:** 100% likely to recommend the platform.

**Hardware Integrity:** 55.6% reported perfect Starter Kits; 44.4% managed minor issues (Iterative improvement opportunity).

**Direct User Suggestion:** Please add more variety — we'd love basil, arugula, and beet greens.

# Initial Digital Footprint

# Physical Proof: From Kit to Harvest

Phase 1: Standardized Inputs  
(Sterilized Coir & Curated Seeds)

Phase 2: Sprouting &  
Milestone Tracking

Phase 3: Harvest-Ready Yield for  
Same-Day Kitchen Delivery

Growers upload these milestone photos directly to the Supabase dashboard to trigger automated QA and harvest-readiness alerts.
